

Week Report 4

Summary of the presentation

Table of commands

Command	What it does	Syntax	Example
pwd	Display the current working directory	pwd	pwd /home/diego (on the bottom)
cd	Changes the current working directory	cd + destination	cd /home/\$USER/Documents
ls	Used for listing the content of a given directory or the file/directory itself	ls + directory	ls -a ~/Picture

Definition of Terms

- File system: The way files are stored and organized to simplify access to data.
- Current directory: The directory where you are at the moment.
- Parent directory: Previous directory
- The difference between your home directory and the home directory: The home directory is previous my home directory.
- Pathname: Indicates the location of the files in the filesystem.
- Relative path: The location of a file starting from the current working directory or a directory that is located inside the current working directory.
- Absolute path: The location of a file starting at the root of the file system.

What is the right to repair movement and why does it matter?

It is a movement that wants to get schemes of any device, so independent repair shops can repair any device. It is important to increase the lifespan of many devices.
